"Fulfillment of the Resolutions of the Twelfth Congress of the Czechoslovak Communist Party for the Further Improvement of the Care of the Workers."

Prague, Pracovní Lékarství, Vol 15, No 1, Jan 1963; p 1.

Abstract: Brief review of several aspects and tasks of occupational medicine: the 10% of time and effort that plant physicians now devote to preventive care is quite inadequate, especially in view of the anticipated further increase in industrial activity in metallurgy, engineering and chemistry; educational activity in particular needs to be stressed, and cooperation with other socialist countries in this field should be strengthened.

"Effect of Styrene on the Health of Workers Employed in the Prod-
uction of Laminates."

Prague, Pracovní Lékarství, Vol 18, No 8, Oct 66, pp 348-352

Abstract [Authors' English summary modified]: Health of 101 women
and 27 men employed in the production of styrene laminates was in-
vestigated. Average exposure was 1.8 years, with a maximum of 3
years. Styrene concentrations up to 700 mg/cubic meter were re-
corded; this is 3.5 more than the Czech legal maximum. Skin dis-
ease and neurasthenic syndromes were found; no affection of the
liver or the gall bladder was determined. The amount of mandelic
acid and of creatinine in the urine is a good indication of the
exposure to styrene vapors. Testing can be made at the end of
the working period. 5 Tables, 5 Czech, 3 Russian references.

AUTHOR: Jindrisek Miroslav

TITLE: Method and device for die-pressing cathodes

PERIODICAL: Referativnyy zhurnal, Elektronika i yeye primeneniye, no. 3, 1963, 15-16, abstract 3A79P. (Czech. pat., cl. 21g, 13/04, no. 101456, October 15, 1961)

TEXT: A die assembly for manufacturing rectangular cathodes with simultaneous extrusion of fixing shoulders is proposed. The die consists of a female die assembly (a pattern for the external cathode surface) and an assembled rod plunger in the form of a flat metal parallelepiped (with a thickness equal to the width of the cathode cavity) with the width divided into 3 parts, of which that in the middle has the form of a symmetrical wedge and can perform alternate motions. Thereby the plunger moves apart owing to which the cathode is stamped. On each of the narrow side edges of the plunger there are 2 protrusions arranged at a certain distance from one another. The cathode is stamped in one operation: a round blank is put onto the rod plunger and around the blank the female die assembly (pattern)

Card 1/2

Method and device for die-pressing...

S/275/63/000/003/002/021

is fixed. The wedge performs a forward motion owing to which a cathode of the desired rectangular cross-section is stamped out of the round blank and at the same time fixing shoulders are extruded. The proposed device and method cut the time for manufacturing cathodes and secure a precise position of the fixing shoulders along the length of cathodes.

TITLE: Development of the homogeneous-reactor vessel ÚJV - ČKD Prague

PERIODICAL: Přehled technické a hospodářské literatury - Energetika a elektrotechnika, v. 18, no. 1, 1961, 31, item no. E61-450

TEXT: This is an abstract of an article entitled in Czech "Vývoj nádoby homogenního reaktoru ÚJV - ČKD Praha" (Development of the homogeneous-reactor vessel ÚJV - ČKD Prague) originally published in the journal Techn. Zpr. ČKD Stalingrad 5, no. 8, 1959, 229-236. The article describes the vessel design, the arrangement of reactor outlets, tests which will be made to verify the strength and corrosion-resistance of the vessel, and outlines the calculation of stresses originating from internal heat sources and the strength-calculation of the entire vessel. The original article contains 6 figures and 4 references. [Abstracter's note: Complete translation].

Lab. Čs. Akad. Věd, Předměstí Akad.; Hyg., Epidemiol. a Urol. Odd., Praha - ČAS. LÉK. ČES. 1957, 96/48 (1495-1500) Tables 5

A report is presented on 69 further patients of trichomonas urethritis in males. 175 cases were diagnosed from 1953 to 1956 from a total of 1972. Examination of urethral secretions in preparations stained by the Giemsa-Romanovsky method is more fruitful than examination of fresh preparations. Pathogenetic factors with reference to the dynamics of male trichomoniasis are presented and are dependent both on the host organism (age, condition or the urethral mucous membrane, general resistance and anatomical anomalies) and on the parasite (strain, virulence and prolonged or repeated exposure). Urethral swabs with carbasone appear to be the most effective treatment.

TITLE: Controlled clinical comparison of 6 neuroleptic drugs ²² [This paper was presented at the 7th Annual Psychopharmacological Meeting, Jesenik, 20-23 January 1965]

SOURCE: Activitas nervosa superior, v. 7, no. 3, 1965, 241-242

TOPIC TAGS: chlorpromazine, pharmacology, psychoneurotic disorder, nervous system drug

ABSTRACT: Chlorpromazine, prochlorperazine, perphenazine, thioridazine, levomepromazine, and chlorprothixene were investigated. 222 patients in groups of 35-39 were used. The effect of the drug was classified according to disappearance, decrease or no change in the symptoms. No difference in the effect of the drug upon schizophrenia symptoms was found.
